

"The" Ag Data Mapping Solution

- Site-specific agricultural software solution using economical, off-the-shelf, computer solutions for data collection, variable rate applications and data display.
- Allows for high resolution USDA (FSA maps) & Web layers for background data.
- Supports many generic file formats - SHP, CSV, TIF, BMP, SID, JPG, JPG2000.
- Simple, flexible, file and folder based data management.
- Advanced tools for working with satellite, aerial & UAV data layers.
- Tools for developing variable rate prescriptions.
- Module for topography and watershed modeling. Using RTK elevation data and able to process LIDAR elevation.
- Generates profiles across any area of the field for assistance in planning ditches or designing tile plans.
- Easily generate layers that are useful for drainage planning, including layers that:
 1. Define areas that are holding water.
 2. Define areas shedding water.
 3. Creates flow accumulations and watersheds that define water flows.
 4. Generates contour maps at adjustable elevation breaks.

Below are four layers created automatically by the watershed modeling process in Ag Data Mapping Solution.

Topography
Image

Depressions

Areas Shedding
Water

Watersheds & Flow
Accumulations

Annual Software Pricing

General - \$120 - Base Module - needed to run any other module. Enables GPS functions to use your PC to collect points, lines, boundaries, and view your location on a map for ditching and soil sampling. Able to do basic Shape file to raster conversions.

Variable Rate Create - \$680 - Import Imagery, Yield, Topography, Soils, EC data to make Zones and Grid maps. Process soil sample data, create soil sample maps & product application maps. Maps can be exported to most common applicators.

Topography/Watershed - \$680 - Tools create watershed areas, flow accumulations, hills, depressions, slope, aspect and contours. Also, have ability to layout and plan ditches and tile in your field, show side profiles of the slope, distance, cut/fill and install depths.

Surface Shaping - \$800 - Take data from topo/watershed data, using specialized tools to re-shape the soil surface. Tools designed to cut & fill minimum amounts of soil to achieve your design.

Veris Mapping - \$430 - Allows you to import the veris DAT files. Connect directly to your veris box in the field and produce on-the-go color veris maps on your PC. Tools for merging surface/deep veris values to get a better view of veris data.

VR Controls - \$400 - Connect PC to certain controllers and GPS source to do VR application. ADMS will show coverage map and write As-Applied maps.

Consultant Package - \$2,500 - Gives access to confidence mapping, online data, faster processing tools, consultant mapping services and free admission to all training classes. Purchase of this package does NOT change other package pricing.

- All ADMS software is sold as separate modules and billed on annual basis.
- The "General" package must be purchased for any other package to function.

Create Management Zones from multiple inputs such as Imagery, Yield, Veris, Soils & Topography.

Zone soil sampling, using GPS to mark Sample Points and navigate back to previous Sample Points.

Write Variable Rate Application maps to most common controllers.
